

How to look after your compression stockings correctly

With good care your compression stockings will remain functional for a long time. Here are a couple of tips for daily care:

Wash after each wear

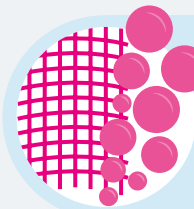

Follow the washing instructions

Wash stockings by hand or on a gentle wash cycle

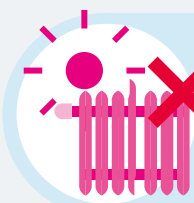

Do not use fabric softeners and optical brighteners

Special care products such as **medi clean** protect the fabric

Air dry or tumble dry (at a low setting)

Do not dry in direct sunlight or on radiators

For optimum therapy support: wear the stockings daily and replace after six months at the latest.
